

DERAILMENT RESPONSE

Hulcher Services changed the way derailment response was performed in the 1960s, and we have been the industry leader for this critical support service ever since.

Our crews are certified to work for all Class I railroads and can respond to derailments on the mainline, on rail yards or at industrial locations. A partial list of our response capabilities includes:

- Rerail or clear cars
- Stockpile materials and commodities
- Perform track reconstruction
- Provide panel rail inventory
- Place roadbed material
- Perform commodity salvage or transfers
- Load-out / tie-down equipment
- Environmental services (hazmat response, remediation)

Hulcher's fleet of heavy equipment includes Caterpillar® sidebooms equipped with padded tracks, to move around the rail yard or right-of-way without damaging existing track.

Our Customer Service Center is staffed 24 / 7 / 365 to take your call. We have strategically-placed divisions across the U.S., Canada and Mexico - including several divisions near major rail yards - and guarantee that our equipment and personnel will be on the road within one hour of your call, any time day or night.

Have your contingency plan in place so you're ready to respond. Contact Hulcher at 800-637-5471 to speak with one of our representatives and learn how we can support your operation's specific needs.
