

TRACK LOADER

A key component of Hulcher Services' derailment response service is the Caterpillar® 977 / 973 track loader.

Hulcher's track loaders are fitted with rear winches to provide towing capability of 60 ton. In addition, the track loader's 4-in-1 bucket operates as a standard bucket, a dozer blade / leveler, a clamshell (or grab) and a bottom dump. This allows the track loader to:

- Move wheels, track and truck or car parts
- Clear / reraill railcars
- Clear trees, grade right-of-way, build roads, build containment berms, build right-of-way and perform site remediation and restoration
- Perform demolition of structures

Our track loaders also support other services:

- Load, unload and install track panel
- Install diamonds, retarders and switches
- Perform grade stabilization
- Trenching, culvert or ditch work
- Demolition of structures
- Environmental remediation
- Flood response clean-up
- Post-spill clean-up services

Hulcher's operators are railroad specialists. They have received training in railroad applications, are current in safety and security certification requirements for all Class I railroads, and have spent years perfecting their craft in maintenance-of-way environments.

Call Hulcher at 800-637-5471 to learn more about our Caterpillar® track loaders.
